(My Dashboard Report)

Student Name:
Shruti Wakchoure

Table of Contents

- Context/environment for dashboard design and development
- Motivation for dashboard (why this dashboard impacts the real-world)
- 3 key research questions that my dashboard seeks to answer
- (Real-world) data source and discussion
- Presentation and discussion of individual dashboard charts
- Presentation and discussion of dashboard
- Answers to 3 key research questions and any recommendations
- URL/ web link for online hosted dashboard (optional)

Context/environment for dashboard design and development

- Designed to uncover trends in Airbnb listings, pricing, and availability across NYC neighborhoods.
- Built with end-users in mind, including hosts, travelers, and city planners for data-driven decisions.
- Developed using Tableau for interactive visualization.

Motivation for dashboard

- Help potential guests make informed booking decisions based on neighborhood prices and availability.
- Enables hosts to benchmark their listings and optimize pricing strategies.
- Assists city officials and planners in understanding Airbnb's impact on housing and tourism trends.

3 key research questions that my dashboard seeks to answer

How do total Airbnb bookings vary across different months of the year?

Which neighborhood groups and neighborhoods have the highest average prices and booking counts for Airbnb listings?

What are the most popular room types across different neighborhood groups, and how do booking counts vary by type?

Who are the top hosts based on total reviews, and what are their associated average listing prices and locations?

(Real-world) data source and discussion

[Inside Airbnb](#) – Real-time listing data across NYC neighborhoods

[Tableau Sample Data](#) – Supplementary demo datasets for visualization

Enables analysis of booking trends, pricing, and host activity.

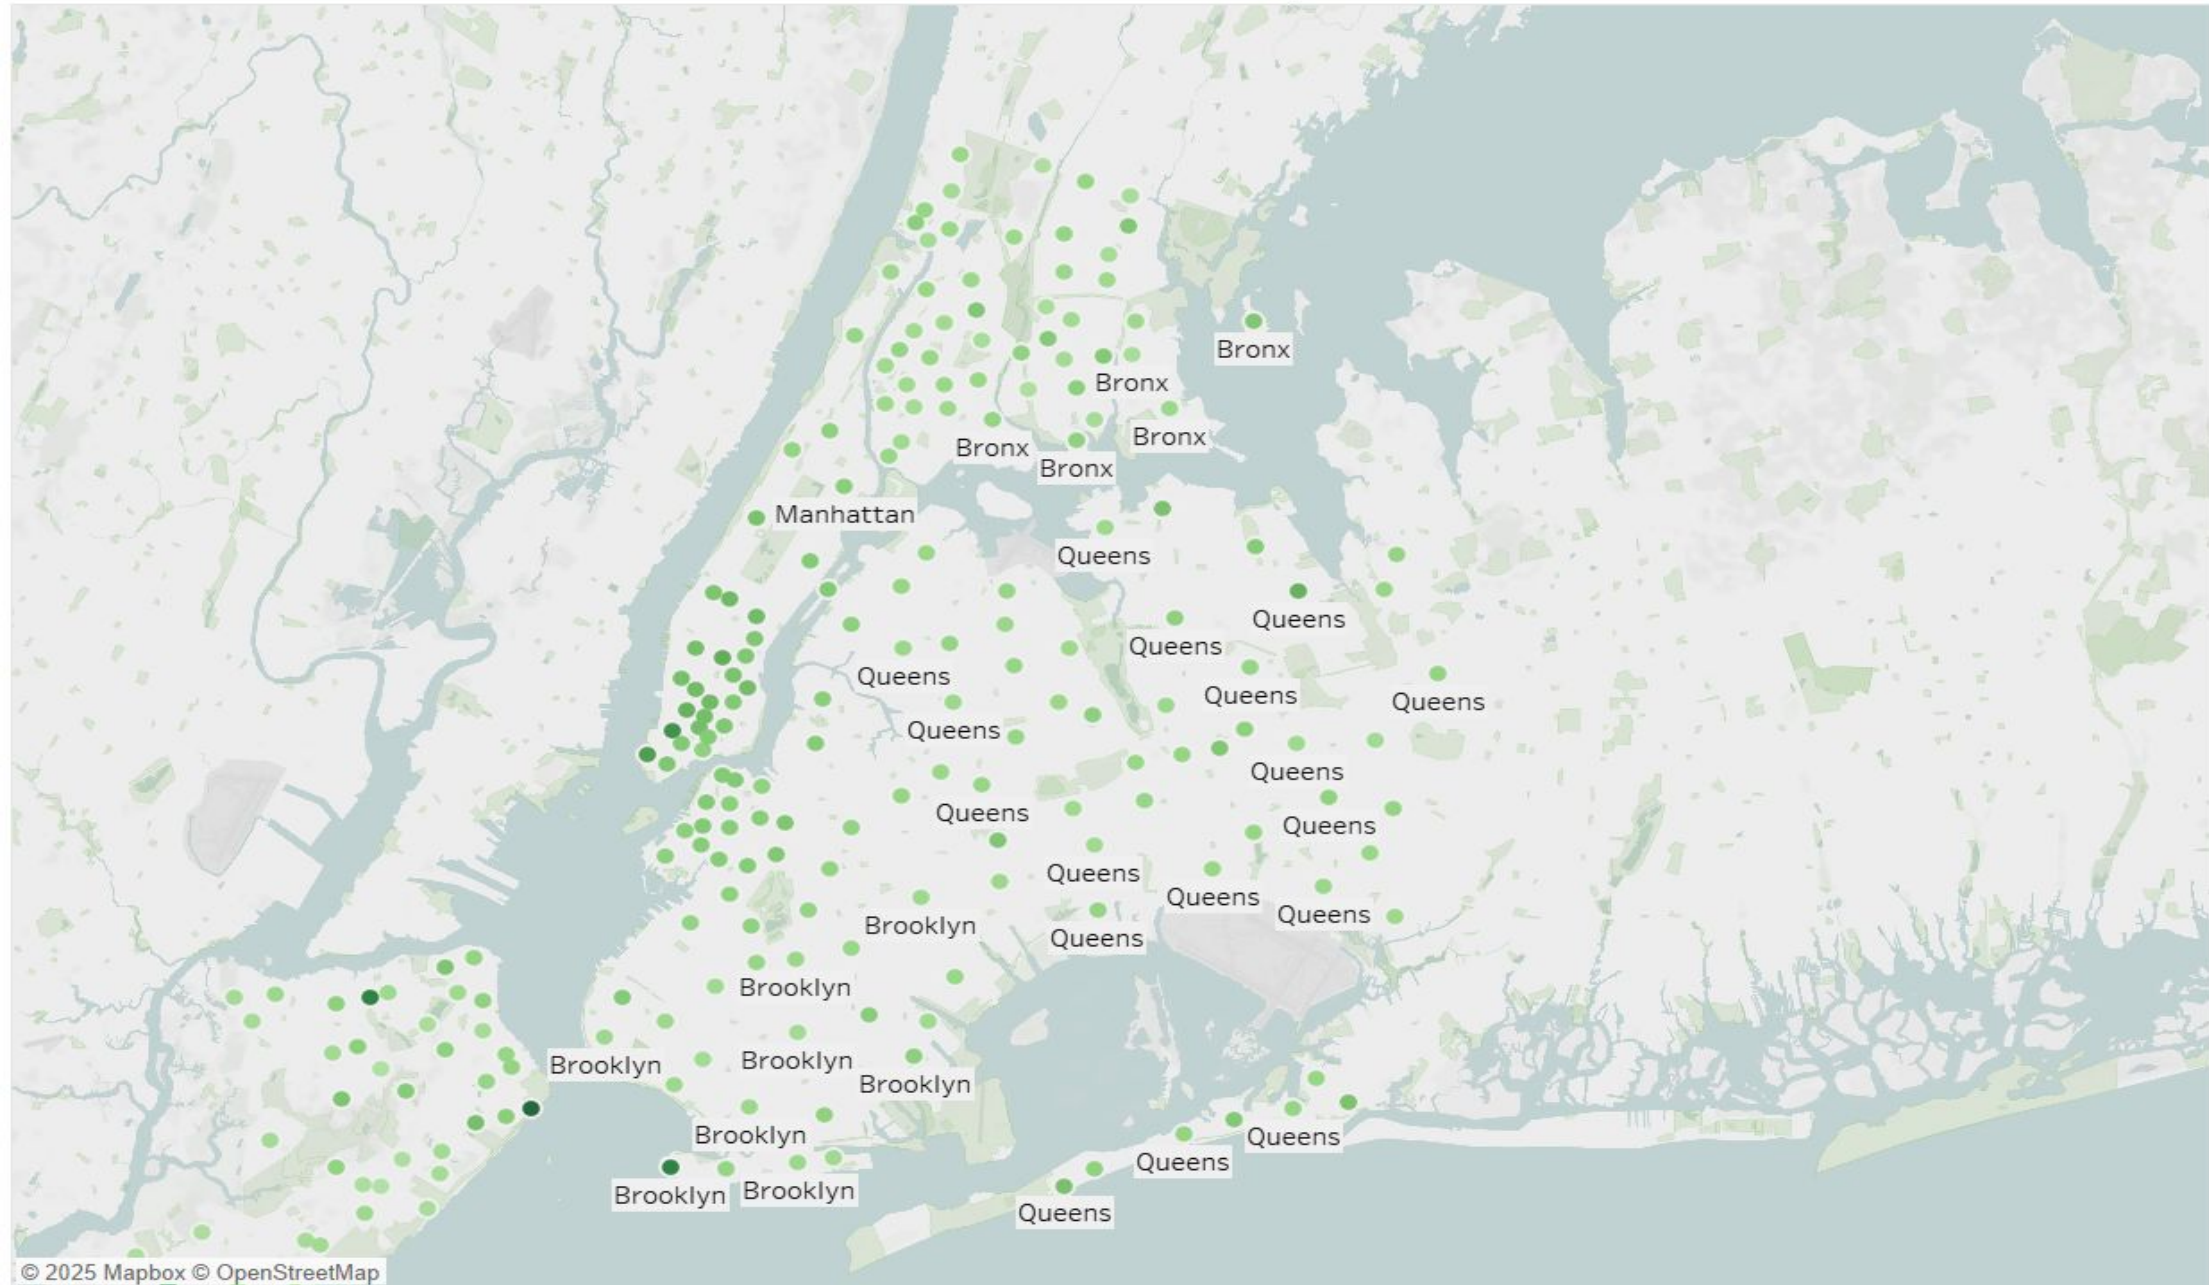

Supports decision-making for travelers, hosts, using real-world, up-to-date data.
